

## Poor Salesman, 47 years old, No LongLife

“I was and I am not able to afford LongLife and I will die about 100 years before the majority of my fellow neighbours. Why do only those people have the chance to drink from the fountain of youth who have already more? This isn't fair!”

## Environmental scientist, 136 years old, 2<sup>nd</sup> LongLife generation

“It would not have been difficult to foresee that populating this planet beyond its carrying capacity wasn't a good idea. Resources on Earth are becoming shorter and shorter. Therefore I decided not to have children to save resources. Now that the first LongLife generation will soon pass away, it's time to rethink how Earth can carry 4-5 simultaneous generations and to possibly change the LongLife movement.”

**Father, grandfather, grand-grandfather,  
172 years old, 1<sup>st</sup> LongLife generation**

**“Recently I finally got retired and now I am starting my third university study together with my youngest grand-granddaughter. I've been married for 136 years and my entire family lives in a big 3-story building in the city. Nowadays every couple can just have or adopt 1 child.”**

## Hippy, 81 years old, No LongLife

“An end point encourages me to make the most of my time and I struggle to achieve my goals in the short time that I have. Mortality makes life matter and meaningful! LongLife makes life boring.”

## Lawyer, 25 years old, LongLife-Interested

“I have just finished my university studies and I want to start working soon. However, it’s very difficult to get into the labour force. Many jobs are still occupied by the old generations. Maybe I need another degree to find a good job – with LongLife I wouldn’t lose much of my life time.”

# Psychologist, 128 years old, 2<sup>nd</sup> LongLife-generation

“Many of my early memories are fading away. It feels like I am missing crucial parts of my identity. I can’t stand it anymore. Living longer does not necessarily mean that I am living happier. Therefore I am thinking of ending my life soon.”
